1. Welcome to Operant Event

Operant Event is a complete, all-in-one platform for planning and running conferences, seminars, and academic or professional events — from the very first announcement to handing out certificates after the closing ceremony.

Think of it as the digital 'control room' for your event. Instead of juggling spreadsheets for paper submissions, a separate tool for collecting registration fees, a mailing list for reminders, and a printed sign-in sheet at the door, everything lives in one connected system:

- Researchers and speakers submit their papers or abstracts online and track their status.
- Your review committee evaluates submissions and records decisions — accept, reject, request changes, or waitlist.
- Delegates register and pay online, and instantly receive a personal QR code.
- Your team builds the day-by-day programme, assigning speakers and sessions.
- On the big day, staff check people in with a quick scan at the door.
- After the event, the system automatically works out who has earned a certificate and lets you issue them with one click.
- Throughout, everyone receives automatic email updates at the right moments — no one has to remember to send them.

One organization can run as many conferences as it likes, and each conference moves through the same clear, predictable stages described in Section 7.

This guide is written for everyone who touches the system — not just the people setting it up. Whether you're an event organizer, a committee member reviewing papers, an author submitting your research, a delegate registering to attend, or a volunteer scanning badges at the entrance, this guide has a section written for you.

 **How to use this guide:** You don't need to read it front to back. Use the Table of Contents to jump straight to the section that matches what you're trying to do right now.

2. Who Uses This Application

Operant Event is built around two broad groups of people: the team that organizes the event, and the people who take part in it. Nobody needs special software or training — everything happens through a normal web browser.

Figure 1 — Everyone who uses Operant Event and the role they play

Platform Super Admin

Before any organizing team can exist, the platform itself needs to be set up by a Platform Super Admin. This is a special account held by whoever operates the Operant Event platform for your organization (typically your IT team or service provider). The Super Admin sits above all organizations and has two exclusive jobs: creating new organizations on the platform (designating each one's first owner), and overseeing every organization that exists — including the ability to suspend one.

Role	In plain terms
Platform Super Admin	The platform operator. Creates new organizations and provisions their first Organization Owner. Can see every organization on the platform in one list and suspend or reactivate any of them. Does not participate in the day-to-day running of any individual conference. There is only one Super Admin account per platform deployment.

💡 If you're setting up a new organization: ask the person who runs the Operant Event platform for your institution to provision a new organization for you. They will create it and send you an invitation email to set your password and take ownership of your new workspace.

Platform Governance — Only the Super Admin Does This

Figure — How the Super Admin creates and governs organizations

Suspending or Reactivating an Organization

From the All Organizations screen, the Super Admin can see every organization on the platform at a glance — its name, how many members it has, and whether it's currently Active or Suspended.

- **Suspend** — immediately blocks every member of that organization from everything: conferences, abstracts, registrations, payments, reports, settings. Nobody inside that organization can override this, no matter what role they hold. Because the effect is immediate and wide-reaching, the Super Admin must confirm the action before it takes effect.
- **Activate** — immediately restores access exactly as it was before the suspension. No data is lost while an organization is suspended; everything simply becomes accessible again.

This is typically used for billing issues, policy violations, or while an account dispute is being resolved — it is a platform-level safety switch, not something that happens as part of normal day-to-day use.

Your Organizing Team

Once an organization has been created, these are the people inside your organization (your society, university, or event company) who plan and run the show. They log in to a shared organizer back-office.

Role	In plain terms
Organization Owner	The person designated as the first owner when the workspace was created, or someone later promoted to full control. Can do absolutely everything, including deciding who else gets which powers.
Organization Admin	Almost as powerful as the Owner — can manage every part of every conference and

	the whole team — except they cannot hand out or change high-level roles.
Conference Admin	The day-to-day event manager. Runs registration, payments, the programme, check-in, certificates, sponsors, and reporting. Does not handle the academic review side.
Track Chair	The academic/scientific lead. Manages the reviewer pool, assigns papers to reviewers, and makes final accept/reject decisions. Does not handle money or logistics.

Everyone Who Takes Part in Your Event

These people never need to be added to your organization's team. They simply create a free personal account and the system automatically gives them the right screens.

Who they are	What they do in the system
Author / Submitter	Submits papers, abstracts, or proposals to one of your conferences.
Reviewer	A subject-matter expert invited by the Track Chair to evaluate assigned papers.
Attendee / Registrant	Registers to attend, pays the applicable fee, and checks in on the day.
Speaker / Session Chair	Presents at or chairs a session — added to the programme by your team.
Check-in Staff	Uses the purpose-built scanning screen on event day at the registration desk.
Exhibitor / Sponsor contact	Tracked as a record by your team — does not currently have a self-service login.

3. Where Do You Log In? The Six Portals

Operant Event shows a different, purpose-built screen depending on who you are — so a delegate never has to wade through organizer settings, and an author never sees a reviewer's scoring form by mistake.

Where Does Each Person Go? — Six Portals

 Login required for all portals except Public Pages

No organisation membership needed to submit a paper, register for an event, or review an abstract.

Figure 2 — The six portals and who uses each one

Portal	Who uses it	What it's for
Organizer Back-Office	Organizing team	Setting up and running conferences end-to-end
Author Portal	Paper submitters	The submission wizard and 'My Abstracts' list
Reviewer Portal	Reviewers	'My Reviews' — assignments and the scoring form
Participant Portal	Attendees / delegates	Choosing a category, paying, viewing tickets
Check-in Kiosk	Registration desk staff	Full-screen QR scanning on event day
Public Pages	Anyone	Sign up, sign in, public programme, certificate verification

4. Getting Started: Creating Your Account

Most people — authors, reviewers, attendees, and organizing team members — create a personal account through the public sign-up page. Organization workspaces are set up separately by the Platform Super Admin (see Section 2).

Figure — Three ways to get an Operant Event account

Creating a personal account

- **Step 1:** Go to the sign-up page (shared by your organizer, or linked from a conference's public page).

- **Step 2:** Enter your name, email address, and a password. The system tells you immediately if your password is too weak.
- **Step 3:** Check your inbox — you'll receive a welcome email confirming your account is active.
- **Step 4:** Sign in. This one login works everywhere in Operant Event — as an author, reviewer, delegate, or organizer.

If you are the designated owner of a new organization: you will receive a special invitation email from the Platform Super Admin when they create your organization. Clicking the link lets you set your password and immediately gives you full Organization Owner access — no separate sign-up step needed.

If you were invited to join an existing organization's team: you'll receive an invitation email with a special link. Clicking it lets you set your password and immediately drops you into the organizer back-office with whatever role you were invited to hold.

One account, many hats: the same email and password can be an Organization Owner for your own society's conferences, a Reviewer for someone else's conference, and an Attendee registering for a third — all at once.

5. Your Organization: The Workspace Behind Every Event

An Organization is the umbrella workspace for everything your society, university department, or event company does in Operant Event. Every conference belongs to exactly one organization.

Creating an Organization

Organizations are created by the Platform Super Admin — the person or team responsible for operating the Operant Event platform. The Super Admin fills in the organization's basic details and specifies who the first Organization Owner should be. If that person does not yet have an account, the system creates one automatically and sends them a set-password email.

 You cannot self-create an organization. If you need a new workspace provisioned, contact your platform administrator.

What Lives Inside an Organization

- Every conference you've ever run or are currently planning — visible in one dashboard.
- Your whole team — everyone with organizer-side access and their role.
- Organization-wide settings — branding, default email sender address, and payment gateway connections.
- Cross-conference reporting — see totals and trends across every event, not just one at a time.

Multiple organizations: a freelance conference manager can belong to more than one organization. When they log in, they simply pick which workspace to work in — each one's data, team, and conferences stay completely separate.

6. Managing Your Team: Members, Roles & Permissions

Changing someone's role later works the same way — open their profile in Team → Members and pick a different role.

Figure — Inviting a team member and assigning their role

Inviting a Team Member

- Open Team → Members in the organizer back-office.
- Click Invite Member, enter their email, and choose their role.
- They receive an invitation email. Once accepted, they appear in your member list.

Built-in Roles vs. Custom Roles

Operant Event ships with four ready-made roles: Organization Owner, Organization Admin, Conference Admin, and Track Chair. For most organizations, these are all you'll ever need.

If you need something more specialized — say, a Finance Officer who sees payment reports but nothing else — an Owner can build a custom role by selecting exactly which individual permissions it should have from the full permission catalogue (see Section 21).

Per-Conference Assignment

Conference Admin and Track Chair are assigned per conference — one person can be Conference Admin for one event while someone else manages a different event in the same organization.

7. Conferences: The Life of an Event

Every conference moves through the same series of clear stages — from a first idea to a wrapped-up archive.

Conference Lifecycle — Seven Stages

Each stage is one-way: you can only move forward (except DRAFT, which can also go directly to ARCHIVED).

Figure 3 — The seven stages of a conference lifecycle

Stage	What's happening
Draft	Private idea — filling in details; nothing visible to the public yet.
Published	Public page is live; abstract submission and/or registration may be open.
Submissions Open	Authors can submit papers/abstracts to your tracks.
Under Review	Submissions closed; reviewers and Track Chair are evaluating them.
Programme Building	Decisions are in; team assembles the day-by-day schedule.
Live / Ongoing	The event is happening; check-in is active.
Completed / Archived	Event ended; certificates can be issued; final reports available.

8. Setting Up a New Conference

Creating a conference is a guided, step-by-step process. You can adjust any of these later.

- **1. Basic details:** Name, short description, start and end dates, time zone, and venue.
- **2. Branding:** Upload a logo and choose accent colours so public pages feel like your event.
- **3. Feature toggles:** Turn on only what this conference needs: Abstract Submissions, Peer Review, Paid Registration, Certificates, Sponsors.
- **4. Tracks:** Create subject tracks authors can submit to (if abstracts are enabled).
- **5. Registration categories:** Define who can register and at what price (if registration is enabled).
- **6. Publish:** Move from Draft to Published when you're ready for the public to see it.

💡 Cloning: running the same annual event? Duplicate a previous conference — carrying over its tracks, form fields, and registration categories — then update the dates.

9. Tracks and the Submission Form Builder

A Track is a subject area that authors submit to — for example, 'Machine Learning' or 'Poster Presentations'. Each track has its own Track Chair, reviewer pool, and custom submission form.

The Submission Form Builder

The form builder offers a library of field types:

Field type	What it collects
Short text	One-line answers: a title, author name, affiliation
Long text / rich text	Multi-paragraph text — ideal for the abstract body
Dropdown	One selection from a fixed list you define
Checkboxes	One or more selections from a list
File upload	PDF, DOCX, or other files up to the maximum size shown
Date picker	A calendar selector
Author / co-author block	Repeating group for each author's name, affiliation, email, ORCID

 **Tip:** Changing a form after authors have already submitted will not retroactively alter existing submissions — plan your form before opening submissions.

10. Submitting a Paper: The Author's Journey

If you're an author submitting a paper to a conference, this section is written for you.

Abstract Submission & Review Journey

Figure 4 — The five steps of the abstract submission journey

Step 1 — Find the Conference and Track

The organization will share a link to the submission page. Select the track you're submitting to and click Submit to this track.

Step 2 — Create or Sign In to Your Account

If you don't have an account yet, you'll be prompted to create one — name, email, password. Free, takes under a minute.

Step 3 — Fill In the Submission Form

Work through the form. Fields marked * are required. You can Save Draft at any time and return later — your draft is private until you actually submit.

Step 4 — Submit

Click Submit. You'll see a confirmation page and receive an email confirmation immediately. Keep it — it's your record of arrival before the deadline.

Step 5 — Track Your Submission

Sign in any time and go to My Submissions. Possible statuses:

Status	What it means
Submitted	Received and queued for reviewer assignment.
Under Review	Reviewers are currently reading and scoring your work.
Revision Requested	The Track Chair has asked for changes before

	a final decision.
Accepted	Your paper has been accepted for the conference.
Waitlisted	May still be included if space allows after all decisions.
Rejected	Not accepted for this round.
Withdrawn	You withdrew the submission yourself.

11. The Peer Review Process

For the Organizing Team (Track Chair)

Once submissions close, the Track Chair manages the review pipeline in four steps:

- **Build the Reviewer Pool:** Add reviewers by email (Track → Reviewers → Add Reviewers). New reviewers receive an invitation; existing account-holders are in immediately.
- **Assign Papers:** Use Auto-assign for even distribution or Manual assign for expertise matching. Each paper can have multiple reviewers.
- **Monitor Progress:** The Assignments dashboard shows how many reviews each reviewer has completed and how many are overdue. Send nudge reminders from this screen.
- **Record the Final Decision:** After reviews are in, the Track Chair records Accept, Reject, Revision, or Waitlist. Authors are notified automatically.

For Reviewers

- Accept the invitation email.
 - Open 'My Reviews' — a list of every paper assigned to you with deadlines.
 - Read the paper and fill in the review form (scores, comments to authors, confidential comments to chair, overall recommendation).
 - Declare a Conflict of Interest if you know the author or have any other reason you can't review impartially — the paper is then reassigned.
 - Submit your review. You can edit it while the review window is still open.
-

12. Registration and Payments

Figure 5 — The registration and payment flow for delegates

For Delegates

- **Step 1:** Find the registration page (linked by the organizer) and review available registration categories.
- **Step 2:** Select your category (e.g. Early Bird, Student, Day Pass). Categories have capacity limits — if 'Sold out', choose an alternative.
- **Step 3:** Fill in your details and answer any additional questions (dietary needs, T-shirt size).
- **Step 4:** Pay online by card (Razorpay or Stripe) or by bank transfer if the organizer allows it.
- **Step 5:** Receive your confirmation email with a personal QR code and PDF ticket.
- **Step 6:** View your ticket anytime under My Registrations.

For the Organizing Team — Setting Up Registration Categories

Open Conference → Registration → Categories → Add Category. For each category:

Setting	What it does
Name	What delegates see (e.g. 'Academic / Full Access')
Price	Amount charged; set to 0 for a free category
Currency	Selected once per conference — shared by all categories
Capacity	Maximum registrations in this category (blank = unlimited)
Visibility period	Dates between which this category is available — use for early-bird pricing
Included items	Optional description of what this ticket includes

💡 Note: Discount codes and coupon codes are not available in the current version. See Section 22 for a full

list of features not yet built.

13. Building the Conference Programme

Once papers are accepted, build the public-facing timetable that speakers and attendees follow.

- **Add your days:** Pre-filled from conference dates; add or remove as needed.
- **Add rooms / venues:** Name each space: 'Main Hall', 'Meeting Room A', 'Online Stream 2'.
- **Add sessions:** Pick a day, room, start/end time, and title. Mark breaks or special events distinctively.
- **Add session items:** Link accepted abstracts (title/authors pull in automatically) or add free-form items for keynotes and invited talks.
- **Assign speakers:** Link to an Operant Event account for certificate eligibility, or enter as a free-form name.
- **Set a session chair:** Assign a chair by account or free-form name.

💡 Publishing: the programme is private until you click 'Publish Programme'. Once published, updates take effect immediately — great for last-minute room swaps on the day.

14. Event Day: Checking In Delegates

Figure 6 — Event-day check-in: two routes to confirming arrival

Before the Day

Ensure all desk staff have the Check-in Staff permission (or higher) in Team → Members.

On the Day: Two Ways to Check Someone In

Option A — Scan QR Code (Recommended): Click the camera/scanner button and hold the delegate's QR code up to the camera. The system shows a green tick and marks them checked in in about two seconds.

Option B — Name or Email Search: Type into the search box to find the registrant, verify identity verbally, then click Check In.

Real-time Counts

A live counter at the top of the kiosk shows expected registrants, checked-in so far, and still expected — updating instantly across all simultaneously-running devices.

💡 Session-level check-in: if your conference has ticketed workshops or a gala dinner, enable session-level check-in so staff pick a session first and each has its own attendee list.

15. Certificates

Figure 7 — Certificate eligibility check and issuance process

Types of Certificates

Type	Typically goes to
Attendance Certificate	Delegates who registered and checked in
Presentation Certificate	Speakers whose paper or talk appeared in the programme
Review Certificate	Reviewers who completed at least the minimum number of assigned reviews

Issuing Certificates

- **Step 1:** Go to Certificates in the back-office after the event ends and check-in is closed.
- **Step 2:** Click Check Eligibility — the system evaluates everyone against the conditions you set.
- **Step 3:** Review the eligibility list; manually override if needed.

- **Step 4:** Click Issue Certificates — personalized PDFs are generated and download links emailed automatically.

💡 **Verification:** every certificate has a unique code. Anyone can visit the public conference page and enter the code to confirm the certificate is genuine — no account required.

16. Sponsors and Exhibitors

Track your event's financial supporters and exhibitors inside the same system you use for everything else.

Sponsors

Go to Conference → Sponsors → Add Sponsor. Record the company name, logo, sponsorship tier, website, payment status, and any internal notes. Sponsors with logos appear on the public conference page in tier order.

Exhibitors

Tracked similarly — company name, contact person, booth number, payment status. Currently managed entirely by your team; exhibitors do not have a self-service portal.

17. Notifications and Automated Emails

Operant Event sends emails at every key moment automatically — no one has to remember to trigger them.

Trigger	Recipient
Account created	New user
Password reset requested	Requesting user
Conference invitation (organizer)	Invited team member
Reviewer invitation	Invited reviewer
Abstract submitted	Author (confirmation)
Abstract status changed	Author
Review assigned	Reviewer
Registration confirmed	Registrant
Registration pending (awaiting manual payment)	Registrant
Certificate issued	Certificate recipient

Customizing Email Templates

Go to Settings → Email Templates to edit the subject line and body of any automatic email. Use merge fields (e.g. {{author_name}}, {{conference_name}}) for personalization. A preview mode shows how the email looks with sample data.

Sending a Manual Broadcast

Use Communications → Broadcast to send a one-off message to a specific audience — all registrants, reviewers with pending reviews, accepted speakers, etc.

18. Reports and Dashboards

The conference home dashboard gives an at-a-glance view: submission counts by status, registration counts by category, review progress, check-in totals, revenue summary, and upcoming tasks.

Detailed Reports Available

Report	What it shows
Registrations Report	Full list with payment status, date, and category
Submissions Report	All submissions, status, track, and decision date
Reviews Report	Reviewer activity, scores, completion rates
Attendance Report	Who checked in, when, and across which sessions
Revenue Report	Income by category, payment method, and timeline
Certificate Report	Eligibility status and download confirmations
Sponsor / Exhibitor Report	Sponsorship fee payment status and records

Each report can be exported as CSV or Excel. Organization Owners and Admins also have a cross-conference overview dashboard for year-over-year trends.

19. Exporting and Importing Data

Exporting

Look for the Export button on any report or list page. Available formats: CSV and Excel (.xlsx). Common exports: full registrant list, accepted abstracts, reviewer assignments, attendance data.

Importing

Bulk import is available for two things:

- Bulk reviewer upload — upload a CSV of reviewer names and emails instead of adding them one by one (Reviewers → Import).
- Bulk submission import — import submissions from a previous system as a one-time migration step (Submissions → Import).

 **Data security:** exported files contain personal information. Store them securely, share only with people who genuinely need them, and do not leave them unprotected on shared drives.

20. Your Account and Security

Updating Your Profile

Click your name or avatar → profile. Update your full name, email address, profile photo, and ORCID. Name changes take effect everywhere immediately.

Changing Your Password

Profile → Security → Change Password. Enter your current password, then the new one twice. Changing your password invalidates all other active sessions on other devices.

Privacy

Operant Event stores only the personal information you provide and uses it solely to run the events you take part in. It is not sold to third parties. For the full privacy statement, contact the event organizer or your platform administrator.

21. Roles and Permissions Reference

This is a complete listing of every individual capability. Most users will never need this section — it's for Organization Owners creating custom roles, or team members wanting to understand their access exactly.

💡 Creating a new organization, viewing every organization on the platform, and suspending or reactivating one are all exclusive capabilities of the Platform Super Admin — a platform-level account that sits above all organizations. None of these are part of the organization role system, and none can be delegated or granted to an Organization Owner, no matter which permissions a custom role carries. The table below covers only organization-level roles.

Capability	Owner	Admin	Conf Admin	Track Chair
Create a new organization	Super Admin only	—	—	—
View every organization on the platform	Super Admin only	—	—	—
Suspend or reactivate an organization	Super Admin only	—	—	—
Edit organization settings	✓	✓	—	—
Invite / remove team members	✓	✓	—	—
Change a team member's role	✓	—	—	—
Create a new	✓	✓	—	—

conference

22. What This Application Does Not Do Yet

This section lists current limitations honestly so you can plan accordingly.

Feature	Current Status
Two-factor authentication (2FA)	Not available. Accounts are protected by email and password only.
Discount codes and coupons	Promotional pricing cannot be applied at registration.
Tax / VAT on fees	The system does not calculate or display tax separately.
Group registrations	Delegates must register one at a time.
Self-cancellation by delegates	An organizer must cancel a registration on a delegate's behalf.
Badge printing	QR codes can be printed on a ticket, but designed event badges require a separate tool.
Partial refunds	Refunds are all-or-nothing; partial amounts require manual processing outside the platform.
Sponsor / exhibitor self-service portal	Their information is managed entirely by the organizing team.
Audit log viewer	Changes are stored internally but there is no screen to browse the history.
Report date-range filtering	Reports show all-time data; filtering to a date range is not yet available.
Waitlist auto-promotion	Waitlisted registrants must be manually moved to registered if a spot opens.
Co-author notifications	Only the primary submitting author receives status-change emails.
In-app messaging	No real-time chat within the platform.

23. Frequently Asked Questions

Q: Is Operant Event free to use?

Pricing for organizations is set by your platform administrator. For delegates, authors, and reviewers, creating a personal account is free. Whether you pay to attend depends on the organizer's fees.

Q: How do I get a new organization set up on the platform?

You cannot create an organization yourself — this is intentional. Only the Platform Super Admin can provision new organizations. Contact your IT department or platform administrator and ask them to create one for you. They will enter the details and designate you as the first owner; you'll then receive an invitation email.

Q: I received an 'invitation to set your password' email — what is that?

It means the Platform Super Admin has created a new organization and designated you as its first owner, or an existing Organization Owner has invited you to join their team. Click the link

(valid for 7 days), set your password, and you'll be taken directly into the back-office. If the link has expired, ask the person who invited you to send a new one.

Q: I can suddenly no longer access my organization — everything is blocked. What happened?

This almost always means your organization has been suspended by the Platform Super Admin — usually for a billing or policy reason unrelated to anything you personally did. It affects every member equally, including the Organization Owner, and no one inside the organization can lift it themselves. Contact your platform administrator; once reactivated, your access returns exactly as it was, with no data lost.

Q: I can't find the conference I want to register for.

Ask the organizer to share the direct link. Conferences are not in a public directory by default.

Q: My paper shows as 'Submitted' — has anyone looked at it yet?

'Submitted' means it arrived and is queued, but not yet assigned to a reviewer. Once assigned, the status changes to 'Under Review'. Contact the Track Chair if you're worried about a deadline.

Q: Can I edit my submission after submitting?

Once submitted, the paper is locked. Contact the Track Chair — they can return it to draft status for revision, though this may not be possible once review has begun.

Q: I missed the submission deadline. Can I still submit?

Deadlines are enforced automatically. Contact the Track Chair or Conference Admin directly — extending the deadline is entirely at their discretion.

Q: I've paid but haven't received my confirmation email.

Check your spam folder. Then sign in and check My Registrations — your payment status shows there even if the email didn't arrive.

Q: My QR code doesn't scan at check-in.

The desk staff can look you up by name or email search and check you in manually in about ten seconds.

Q: I want to attend AND submit a paper. Do I need two accounts?

No. One account handles everything — register as a delegate and submit your paper using the same login.

Q: Can I review for a conference I didn't submit to?

Yes. Being a reviewer is completely independent of whether you submitted a paper.

Q: How do I transfer organization ownership to someone else?

Go to Team → Members, find the new owner's profile, and promote them to Organization Owner.

Q: Is there a mobile app?

No dedicated app. Every page works well in a mobile browser (Chrome, Safari, Firefox, Edge).

24. Glossary of Terms

Definitions for every term used in Operant Event, in plain English.

Term	Definition
Abstract	A short summary of a paper or research work submitted to a conference track.
Assignment	Connecting a reviewer to a specific paper they will evaluate.
Attendee	A person who registers to attend a conference. Also: registrant, delegate.
Back-office	The organizer-facing screens for managing a conference.
Broadcast	A one-off email sent by an organizer to a defined group.
Camera-ready	A final, print-ready version of an accepted paper for publication.
Capability	One individual permission in the system. Custom roles are built from capabilities.
Certificate verification code	A unique code on every certificate for public verification of authenticity.
Check-in	Confirming a delegate's arrival by scanning their QR code or searching by name/email.
Conference	A single event — academic conference, workshop, or summit — managed in Operant Event.
Conference Admin	Organizer role for logistics: registration, payments, programme, check-in, certificates.
Conflict of interest	A connection between a reviewer and an author that prevents impartial evaluation.
Custom role	A role created by an Owner with a hand-picked set of individual capabilities.
Draft	The private earliest stage of a conference before it is publicly visible.
Exhibitor	A company with a booth at the event; tracked by the organizing team.
Export	Downloading a list from Operant Event as CSV or Excel.
Import	Uploading a CSV to add reviewers or submissions in bulk.
Kiosk	The check-in screen designed for full-screen tablet or laptop use at the registration desk.
Merge field	A placeholder in an email template (e.g. {{author_name}}) replaced with real data on send.
ORCID	Open Researcher and Contributor ID — a unique academic identifier. Optional in Operant Event.
Organization	The umbrella workspace that owns conferences, the team, and organization-wide settings.
Peer review	Evaluation of submitted papers by subject-matter experts before an accept/reject decision.
Portal	One of the six purpose-built views, each designed for a specific type of user.
Programme	The published schedule: which sessions

	happen when, where, with which speakers.
QR code	A square barcode on a delegate's ticket, scanned at check-in to confirm identity.
Registration	The process of signing up to attend a conference, including payment if required.
Registration category	A ticket type with its own price, capacity, and availability window.
Reviewer	An expert invited to evaluate submitted papers and recommend a decision.
Session	A time slot in the programme in a specific room, containing one or more session items.
Session Chair	The person who introduces and manages a session.
Session item	A single presentation, talk, or activity within a session.
Slug	A short, URL-friendly version of a name used in web addresses.
Speaker	A person presenting at a session in the programme.
Sponsor	A company or organization financially supporting the conference.
Submission	A paper, abstract, or proposal sent by an author to a conference track.
Track	A thematic sub-group within a conference collecting submissions in one subject area.
Track Chair	Academic lead for a track — manages reviewers, assigns papers, records decisions.
Waitlist	A decision status meaning possible acceptance if space opens after main decisions.
Withdrawal	An author's decision to remove their own submission. Cannot be undone via the platform.
